**Dual Action Levers**

The dual action levers allow quick and easy transition between two different modes, which are used for either compartment fires or free burning fires.

**LCG Attachment**

LCG (Liquid Cooling Garment) attachment. Through the use of an LCG, the device provides constant cooling for the operator, resulting in increased efficiencies and safety.

**Water Control**

With two settings built into the water control, the user can efficiently adjust both the spray pattern and the flow rate control.

**PEEK Shell Construction**

PEEK is a very durable material which can withstand a multitude of corrosives. The shell construction means that all the plumbing for the LCG is built in.
